# From Access to Action

Turning data and capabilities into effective, people-centred early warnings

GEORGIA

## 1. Stronger national capabilities

- Significant development of Georgia's NMHS in recent years
- **New ICT, data collection** and **operational systems**
- Better access to meteorological and hydrological data and products

## 2. Closing the last mile

- Warnings must reach the **right people, at the right time,** in an actionable form
- Stronger links between NMHSs, **civil protection and end users**
- **Preparedness and readiness** remain a key challenge

## 3. Impact-based early warning

- From hazard forecasting to **impact-based early warning systems**
- Integrating meteorological, hydrological and other hazard information
- Focus on **impacts for people, infrastructure and society**

## 4. Regional cooperation as an enabler

- **Georgia–Armenia cooperation:** transboundary rivers and meteorological data exchange
- Joint regional actions on **flood and drought resilience**
- WMO support, including regional project proposal under the **Climate Adaptation Fund**

DATA & OBSERVATIONS → FORECASTS & WARNINGS → PREPAREDNESS & READINESS → IMPACTS & ACTION
